

Sai Hemanth Babu Sunkari

Denton, Texas, United States | hemanth.sunkari@gmail.com | (940) 977-5002 | github.com/hemanth145 | linkedin.com/in/sai-babu-s-318b4634b

PROFESSIONAL SUMMARY

Software Engineer with hands-on experience building secure, scalable microservices in Java/Spring Boot and event-driven systems with Apache Kafka, deployed via Docker/Kubernetes on AWS (EKS, EC2, S3, Lambda). Strong grounding in the Software Development Life Cycle (SDLC), including design, application development, code reviews, testing, CI/CD, and production support/on-call for operational stability. Comfortable troubleshooting complex distributed-system issues and tuning SQL for reliability and performance; experienced documenting architecture and deployment procedures and leveraging GenAI tools for faster iteration while validating outputs through peer review and se

EDUCATION

University of North Texas
Master of Science, *Computer Science*

Jan 2023 - Dec 2024
GPA: 3.45

SKILLS

Programming Languages: Java, Python, C++, C#, JavaScript, TypeScript, HTML5, CSS3, SQL, PHP

Cloud & DevOps: AWS (EKS, EC2, S3, Lambda), Docker, Kubernetes, CI/CD Pipelines, Git, GitHub

Frameworks & Tools: Spring Boot, Spring Security, React, Redux, Apache Kafka, LangChain, Ollama, REST APIs, JDBC, Bootstrap

Databases: MySQL, PostgreSQL, MongoDB, SQL Server, NoSQL

CS Fundamentals: Data Structures & Algorithms, OOP, Distributed Systems, Microservices, Agile / Scrum

Soft Skills: Problem-solving, Analytical skills, Collaboration, Ownership

AI & Data: Machine Learning (coursework), Pandas, NumPy, PyTorch, Transformers, Tableau, Data Visualization, GenAI tools

WORK EXPERIENCE

Coder Version | Software Engineer

Feb 2025 - Present

- Designed and developed scalable, event-driven microservices using Java and Spring Boot, architecting resilient distributed systems capable of handling high-volume financial data processing.
- Built and maintained Apache Kafka producers and consumers for asynchronous, real-time event streaming, enabling fault-tolerant and cost-effective data flow between decoupled services.
- Integrated secure RESTful APIs with Spring Security, ensuring seamless and authenticated communication across microservices in a large-scale distributed environment.
- Containerized applications with Docker and authored Kubernetes deployment manifests; managed orchestration on AWS EKS, significantly improving system scalability, reliability, and operational excellence.
- Optimized complex SQL queries and performed performance tuning to ensure data integrity, accelerate business intelligence reporting, and reduce latency in production systems.
- Practiced CI/CD principles across the full software delivery lifecycle and participated in code reviews, on-call operations, and production monitoring to uphold engineering standards.

Cognizant Technology Solutions | Programmer Analyst Trainee | Chennai, India

Aug 2021 - Dec 2022

- Contributed to multiple projects using Java, Python, JavaScript, and C to develop data-driven solutions, applying object-oriented design principles and best practices.
- Designed and maintained relational databases ensuring efficient data storage, integrity, and analytics readiness to support cross-functional reporting needs.
- Collaborated with cross-disciplinary teams to analyze operational data, identify trends, and deliver actionable insights that improved project timelines and stakeholder decisions.
- Enhanced system efficiency by developing scalable solutions and applying statistical methods to validate results, demonstrating strong problem-solving and analytical skills.

PROJECTS

Real-Time Face Recognition & Attendance System

- Designed and deployed a real-time face recognition system using Python, Dlib, and OpenCV, integrating facial landmark detection, histogram equalization, and Adaboost/Haar cascade tracking for high accuracy.
- Optimized system performance for real-time execution via multithreading and memory-efficient data handling; validated across diverse camera environments to ensure production-grade reliability.
- Documented system architecture, algorithms, and deployment procedures to support maintainability and future scalability — demonstrating ownership across design through operations.

EduConnect Admission Hub

- Architected and built a full-stack college admission web platform using JSP for server-side logic, MySQL for persistent storage, and HTML/CSS/JavaScript for a responsive front-end UX.
- Engineered form-submission pipelines, database schema design, and cross-browser rendering to ensure data integrity and seamless user interactions across the full application lifecycle.

Local AI Chatbot CLI

- Built a local CLI chatbot using Python, LangChain, and Ollama with on-device LLM models (Gemma 3.1B, Gemma 4), enabling private, low-latency conversational AI with no cloud dependency.
- Diagnosed and fixed environment issues including a corrupted UTF-16-encoded requirements.txt causing pip install failures and a Windows console encoding crash on emoji output; patched both with `sys.stdout.reconfigure(encoding="utf-8")`.
- Configured a Python virtual environment and installed PyTorch and transformers dependencies for seamless local model execution and dependency management.

CERTIFICATIONS & ACHIEVEMENTS

- Google IT Automation with Python - Coursera
- Web Design for Everybody: Basics of Web Development & Coding - Coursera
- Google IT Support Professional Certificate - Coursera
